Office	MySQL	JSON
XML	VMWare	SmartGIT
PHPMyAdmin	Python	Django
AEM6	SCRUM	Trello
SOAP	API REST	SQL Server
Oracle	Laravel	ReactJS

Experience

PHP Developer – **Terra**

Julio 2020 – Actual

Responsibilities

- Analyze, design, plan and develop new modules for the company goals focused in the RRHH administration like employees, assignment of assets and cars management.
- Re-engineering and designing of an ERP for the logistics and inventory of the materials for the correct flow from the acquisition of materials to the installation for the clients.

Lead Developer – **Solfine**

Julio 2016 – Julio 2020

Responsibilities

- My role is to fix all bugs that exist with the purpose of improving the operation; I also made new implementations to facilitate new tasks, and scripts that fix all the misinformation that was saved with the wrong calculations in this payroll system.
- As a Project Manager in the second project my responsibility was to planify, execute and close an ERP Project ("Solfine" a real estate administration system) where I managed teams and managed expectations aligning the project to business goals.
- As a Project Manager in the third Project my responsibility was to planify, execute an ERP (Payment Project) where I managed teams and tasks and administration of the resources reaching the goals with success. I acted as the lead developer and fullstack.

Python Developer – **Divox**

Junio 2018 – Octubre 2018

Responsibilities:

- As a Fullstack Developer, I developed the modules of the internal systems (Web and Mobile applications) respecting all the requirements and rules of the process and creating an excellent implementation and functionality.

PHP Developer – **Televisa**

Octubre 2015 – Julio 2016

Responsibilities:

- My main responsibility was to create modules or cruds for news on the main website of the company. They had to be global or general so they can be used in other websites not only the main.
- I have created modules with JSP in AEM CQ5 CMS, that were integrated in different projects. I was working in conjunction with other teams like Design and Backend using their resources to reach the planned objectives, fulfilling the goals in time, and QA.
